ICT Innovation in Healthcare: Opportunities and Challenges

It is believed that Information and Communication Technology (ICT) will make huge impact in health sector to enhance the quality of health care system, safety and security of patients and also the reduction of operating and administrative cost. But the ICT intervention in the health care field brings a few challenging questions regarding transparency, accountability, and privacy of the health data.

Technology and Women Empowerment

Technological advancement played a crucial role in social change through the changes in social structure and social relationships. The familiarity of women with technology and its application provides them opportunities for self-expression and make their identity in the society. In today's world, technology is an effective tool or a source to reduce the stigmas around gender and develop gender equality.

Social Infrastructure and PPP Model

The public private partnership (PPP) model is gaining worldwide popularity for building and financing infrastructure projects. Education and Health, the twin most important areas of social infrastructure, can be developed through the PPP model. But the case studies show that there are issues and challenges for the development of social infrastructure through PPP model.

Legal Literacy among youth in India

Legal literacy or legal awareness is aimed at the empowerment of individuals regarding issues involving the law. Legal literacy is crucial because it is the understanding of the law that may be used as a tool by vulnerable groups to comprehend and evaluate the law, to learn about the extent of their legal rights, and to get those rights enforced by acting and putting the legal system into force.

Socio-Cultural factors affecting solid waste management in residential areas

Most towns in developing countries have struggled greatly with the collection, transportation, and disposal of solid waste. Solid-Waste Management (SWM) is a multidimensional issue that incorporates political, institutional, social, environmental, and economic aspects. There are a number of socio-cultural factors that influence solid waste minimisation practices in residential areas in India.
